

Quality Policy

Rogers Transport is committed to being an industry leader in providing Quality Transport and Warehousing services, giving our customers a competitive advantage through innovation, technology and highly cost-effective transport solutions.

It is the policy of this company to continually improve in all areas of our business, and to develop procedures and systems that always ensure a high level of professionalism and service.

This will be supported by a Quality Management System to ensure ongoing process improvement and staff development, and wherever possible, a detailed set of operating instructions and procedures.

Quality objectives and goals will continue to be set and all employees of Rogers Transport will strive to achieve these and lock all improvements in place.

We will be successful because we are committed and encouraged to act within the intent of this policy statement.

Rogers Transport recognises that the ongoing pursuit of Quality Systems, people, equipment and procedures will contribute many essential elements to a professional and profitable business.

Gary Rogers
Managing Director
Rogers Transport
